All Christkindelmärkte held on municipal land in Regensburg are subject to the city's strict environmental regulations.

This is regulated, for example, in the **Waste Management Bylaws (Abfallwirtschaftssatzung) § 3, para. 2**

„The city works towards ... events on its premises and property so that as little waste as possible is generated; at such events, food and drinks should only be served in reusable containers and with reusable crockery and cutlery, ...“

Under the City of Regensburg's conditions for the Regensburg Christkindlmärkte, stallholders are required to use reusable tableware. The currently valid Packaging Act (VerpackG) must be complied with, including the **reusable offering obligation** and the **ban on single-use plastics**.

A dedicated **recycling yard (Wertstoffhof)** is being set up at FrauenbergI for the operators of the Christkindelmärkte to support the proper, separated disposal of the waste generated.

The City of Regensburg also enables, through the signed motivation declaration on **foodsharing**, that food from public events can be rescued or handed over to non-profit organisations such as the Tafel (food bank). [Regensburg becomes a foodsharing city](#)
